

Setting up a Multi-User Network in Gym Assistant 1.5

October 2003

Setting Up the Network

Your computers must be configured as a peer-to-peer network so that the Back-Office computer can access the Front-Disk computer's hard drive.

The Front-Desk hard drive must be shared and the back-office computer must be configured with the front-desk hard drive mapped to one of the available drive letters.

Please refer to your computer's User's Guide for information about file/folder sharing or consult with a computer professional.

Front-Desk Computer

1. Install Gym Assistant on the Front-Desk computer.
2. Start Gym Assistant and enter the **Multi-User** or **Front-Desk** registration code. If you have previously registered the software, then select **Register This Software** from the **File** menu.
3. In the Workstation ID dialog that appears, confirm that the **Station ID** is set to **Front-Desk Multi-User** and click OK.

Back-Office Computer

1. Install Gym Assistant on the Back-Office computer.
2. Start Gym Assistant and enter the **Back-Office** registration code. If you have previously registered the software, then select **Register This Software** from the **File** menu.
3. In the Workstation ID dialog that appears, confirm that the **Station ID** is set to **Back-Office #1**.
4. Click the Set button, then browse to find the **Members.Dat** file in the Gym Assistant 1.5 folder on the Front-Desk computer.
5. Confirm that the Data Path item is correctly pointing to the Gym Assistant 1.5 folder on the Front-Desk computer, then click OK.
